

**MINNESOTA STATE RETIREMENT SYSTEM**  
**STATE EMPLOYEES RETIREMENT FUND**  
ACTUARIAL VALUATION REPORT AS OF JULY 1, 2015

December 14, 2015

Minnesota State Retirement System  
State Employees Retirement Fund  
St. Paul, Minnesota

Dear Board of Directors:

The results of the July 1, 2015 annual actuarial valuation of the State Employees Retirement Fund are presented in this report. This report was prepared at the request of the Board and is intended for use by the Board and staff and those designated or approved by the Board. This report may be provided to parties other than the Fund only in its entirety. GRS is not responsible for the consequences of any unauthorized use of this report.

The purpose of the valuation is to measure the Fund's funding progress and to determine the required contribution rate for the fiscal year beginning July 1, 2015. Note that we have not attempted to quantify the impact of GASB Statements No. 67 and No. 68 in this report. Please see the separate report dated November 30, 2015.

The valuation was based upon information furnished by the Minnesota State Retirement System (MSRS), concerning benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not otherwise audit the data. We are not responsible for the accuracy or completeness of the information provided by MSRS.

Actuarial assumptions, including discount rates, mortality tables and others identified in this report, are prescribed by Minnesota Statutes Section 356.215, the Legislative Commission on Pensions and Retirement (LCPR), and the Board of Directors. These parties are responsible for selecting the plan's funding policy, actuarial valuation methods, asset valuation methods, and assumptions. The policies, methods and assumptions used in this valuation are those that have been so prescribed and are described in the Actuarial Basis of this report. MSRS is solely responsible for communicating to GRS any changes required thereto.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of our assignment, we did not perform an analysis of the potential range of such future measurements.

Actuarial standards do not require the actuary to evaluate the ability of the plan sponsor or other contributing entity to make required contributions to the plan when due. Such an evaluation was not within the scope of this project and is not within the actuary's domain of expertise. Consequently, the actuary performed no such evaluation.

This report should not be relied on for any purpose other than the purpose described herein. Determinations of the financial results associated with the benefits described in this report in a manner other than the intended purpose may produce significantly different results.

The signing actuaries are independent of the plan sponsor. We are not aware of any relationship that would impair the objectivity of our work.

Brian B. Murphy and Bonita J. Wurst are Members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. In addition, Mr. Murphy meets the requirements of "approved actuary" under Minnesota Statutes Section 356.215, Subdivision 1, Paragraph (c).

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge and belief the information contained in this report is accurate and fairly presents the actuarial position of the State Employees Retirement Fund as of the valuation date and was performed in accordance with the requirements of Minnesota Statutes Section 356.215, and the requirements of the Standards for Actuarial Work established by the LCPR. All calculations have been made in conformity with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board and with applicable statutes.

We are available to answer any questions or provide further details.

Respectfully submitted,

Brian B. Murphy, FSA, EA, MAAA

Bonita J. Wurst, ASA, EA, MAAA

BBM/BJW:bd

## **Other Observations**

### **General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Plan Contributions and Funded Status**

Given the plan's contribution allocation procedure, if there are no changes in benefits or contributions and all actuarial assumptions are met (including the assumption of the plan earning 8.0%), it is expected that:

- (1) The unfunded actuarial accrued liabilities on a market value of assets basis will be fully amortized after approximately 35 years,
- (2) The funded status of the plan will increase gradually towards a 100% funding ratio, and
- (3) The unfunded liability will grow initially as a dollar amount before beginning to decline.

### **Limitations of Funded Status Measurements**

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

- (1) The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations, in other words of transferring the obligations to a unrelated third party in an arm's length market value type transaction.
- (2) The measurement is dependent upon the actuarial cost method which, in combination with the plan's amortization policy, affects the timing and amounts of future contributions. The amounts of future contributions will most certainly differ from those assumed in this report due to future actual experience differing from assumed experience based upon the actuarial assumptions. A funded status measurement in this report of 100% is not synonymous with no required future contributions. If the funded status were 100%, the plan would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).
- (3) The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets, unless the market value of assets is used in the measurement.

## Summary of Valuation Results

### Contributions

The following table summarizes important contribution information as described in the Development of Costs section.

| Contributions  | Actuarial Valuation as of |              |
|--|---------------------------|--------------|
|  | July 1, 2015              | July 1, 2014 |
| Statutory Contributions - Chapter 352 (% of Payroll) | 11.00%                    | 11.00%       |
| Required Contributions - Chapter 356 (% of Payroll)  | 12.44%                    | 12.82%       |
| Sufficiency / (Deficiency)                           | (1.44)%                   | (1.82)%      |

The contribution deficiency decreased from 1.82% of payroll to 1.44% of payroll. The primary reason for the decreased contribution deficiency is the recognition of deferred gains on assets from prior years.

Based on the actuarial value of assets and current contribution rates, statutory contributions are not sufficient to fully amortize the unfunded actuarial accrued liability over the statutory amortization period of 26 years. On a market value of assets basis, contributions are deficient by 0.45% of payroll. Based on the market value of assets and other methods and assumptions described in this report, current statutory contributions will eliminate the unfunded liability in 35 years.

The Plan Assets section provides detail on the plan assets used for the valuation including a development of the actuarial value of assets (AVA). The market value of assets (MVA) earned approximately 4.4% for the plan year ending June 30, 2015. The AVA earned approximately 12.6% for the plan year ending June 30, 2015 as compared to the assumed rate of 8.0%. The assumed rate is mandated by Minnesota Statutes.

Participant reconciliation and statistics are detailed in the Membership Data section. The Actuarial Basis section includes a summary of plan provisions and actuarial methods and assumptions used for the calculations in this report.

Accounting and financial reporting information prepared according to GASB Statements No. 67 and No. 68 was provided to MSRS in a separate report dated November 30, 2015.

## Summary of Valuation Results

A summary of principal valuation results from the current valuation and the prior valuation follows. Any changes in plan provisions, actuarial assumptions or valuation methods and procedures between the two valuations are described after the summary.

|   | <b>Actuarial Valuation as of</b> |                     |

## Summary of Valuation Results

### Effects of Changes

The following changes in plan provisions, actuarial assumptions, and methods were recognized as of July 1, 2015:

- The discount rate was changed from 8.0% through June, 30, 2017 and 8.5% thereafter to 8.0% for all years.
- The inflation assumption was changed from 3.00% to 2.75%.
- The payroll growth assumption was changed from 3.75% to 3.50%
- Assumed increases in member salaries were decreased by 0.25% for all ages.
- The assumed post-retirement benefit increase rate was changed from 2.0% per year through 2015 and 2.5% thereafter to 2.0% per year through 2035 and 2.5% per year thereafter.

Refer to the Actuarial Basis section of this report for a complete description of these changes. The combined impact of the above changes was to increase the accrued liability by \$64 million and increase the required contribution by 0.3% of pay, as follows:

|   | <b>Before<br/>Changes</b> | <b>Reflecting<br/>Assumption<br/>Changes</b> |
|---|---------------------------|--|
| Normal Cost Rate, % of Pay                              | 7.4%                      | 7.7%   |
| Amortization of Unfunded Accrued Liability,<br>% of pay | 4.4%                      | 4.4%   |
| Expenses (% of Pay)                                     | 0.3%                      | 0.3%   |
| Total Required Contribution, % of Pay                   | 12.1%                     | 12.4%  |
| Accrued Liability Funding Ratio                         | 86.1%                     | 85.7%  |
| Projected Benefit Funding Ratio                         | 97.0%                     | 95.8%  |
| Unfunded Accrued Liability (in billions)                | \$1.8                     | \$1.9  |

## Summary of Valuation Results

### Valuation of Future Annual Post-Retirement Benefit Increases

Benefit recipients receive a future annual compounding 2.0% post-retirement benefit increase. If the accrued liability funding ratio, determined on a market value of assets basis, reaches or exceeds 90% (based on a 2.5% post-retirement benefit increase assumption) for two consecutive years, the benefit increase will revert to 2.5%. If, after reverting to a 2.5% increase, the accrued liability funding ratio (determined on a market value of assets basis) declines to 80% or less for the most recent actuarial valuation year or 85% or less for two consecutive years, the benefit increase will decrease to 2.0%. Benefit increases already granted, however, will not be affected.

To determine an assumption regarding a future change in the post-retirement benefit increase, we performed a projection of liabilities and assets based on the following methods and assumptions:

- Future investment returns and liability discount rates of 8.00%;
- Open group; stable active population (new member profile based on average new members hired in recent years);
- The post-retirement benefit increase rate is assumed to be 2.0% per year until the accrued liability funding ratio threshold required to pay a 2.5% post-retirement benefit increase is reached; and
- Current statutory contribution levels (i.e., not including potential contribution increases under the contribution stabilizer statutes).

Based on these assumptions and methods, the projection indicates that this plan is expected to attain the accrued liability funding ratio threshold required to pay a 2.5% post-retirement benefit increase in the year 2035, and that the plan would begin paying 2.5% benefit increases on January 1, 2036. This assumption is reflected in our calculations. This is only an assumption; actual timing will depend on actual experience.

## Summary of Valuation Results

### Risk Measures Summary (*Dollars in Thousands*)

Notes pertaining to numbered columns:

- (5) The Funded ratio is the most widely known measure of a plan's financial strength, but the trend in the funded ratio is much more important than the absolute ratio. The funded ratio should trend to 100%. As it approaches 100%, it is important to re-evaluate the level of investment risk in the portfolio and potentially to re-evaluate the assumed rate of return.
- (6) and (7). The ratio of Retiree liabilities to total accrued liabilities gives an indication of the maturity of the system. As the ratio increases, cash flow needs increase, and the liquidity needs of the portfolio change. A ratio on the order of 50% indicates a maturing system.
- (8) and (9). The ratios of liabilities and assets to payroll gives an indication of both maturity and volatility. Many systems have ratios between 500% and 700%. Ratios significantly above that range may indicate difficulty in supporting the benefit level as a level % of payroll.
- (10) and (11). The portfolio standard deviation measures the volatility of investment return. When multiplied by the ratio of assets to payroll it gives the effect of a one standard deviation asset move as a percent of payroll. This figure helps users understand the difficulty of dealing with investment volatility and the challenges volatility brings to sustainability.
- (12) The ratio of unfunded liability to payroll gives an indication of the plan sponsor's ability to actually pay off the unfunded liability. A ratio above approximately 300% or 400% may indicate difficulty in discharging the unfunded liability within a reasonable time frame.
- (13) The ratio of non-investment cash flow to assets is an important measure of sustainability. Negative ratios are common and expected for a maturing system. In the longer term, this ratio should be on the order of approximately -4%. A ratio that is significantly more negative than that for an extended period could be a leading indicator of potential exhaustion of assets.
- (15) and (16). Investment return is probably the largest single risk that most systems face. The year by year return and the 5-year geometric average give an indicator of the realism of the systems assumed return. Of course, past performance is not a guarantee of future results. The performance data for the Combined Funds (pooled investments of major Minnesota Public Retirement Systems) is presented in these columns. The source of this data is the Minnesota State Board of Investment.

Information prior to 2012 provided by prior actuary. See prior reports for additional detail.

## Supplemental Information

The remainder of the report includes information supporting the results presented in the previous sections.

- **Plan assets** presents information about the plan's assets as reported by the Minnesota State Retirement System. The assets represent the portion of total fund liabilities that has been funded.
- **Membership data** presents and describes the membership data used in the valuation.
- **Development of costs** shows the liabilities for plan benefits and the derivation of the contribution amount.
- **Actuarial basis** describes the plan provisions, as well as the methods and assumptions used to value the plan. The valuation is based on the premise that the plan is ongoing.
- **Additional schedules** includes a summary of funding progress over the long term.
- **Glossary** defines the terms used in this report.

\* This exhibit does not reflect service earned in other MSRS or Combined Service Annuity benefits. It should not be relied upon as an indicator of non-vested status.

In each cell, the top number is the count of active participants for the age/service combination and the bottom number is valuation earnings for the fiscal year ending on the valuation date.

## Development of Costs

### Actuarial Valuation Balance Sheet (*Dollars in Thousands*)

The actuarial balance sheet is based on the principle that the long-term projected benefit obligations of the plan should be ideally equal to the long-term resources available to fund those obligations. The resources available to meet projected obligations for current members consist of current fund assets plus the present value of anticipated future contributions intended to fund benefits for current members. In the exhibit below, B.2 is the estimated present value of contributions to fund the normal cost rate for current members until their respective termination dates. Item B.1 is the present value of the total 11% statutory contribution net of normal cost and anticipated plan expenses during the period from the valuation date to the statutory unfunded amortization date.

The contributions made in excess of amounts required for current benefit payments are accumulated as a reserve to help meet benefit payments in later years. It is this reserve system which permits the establishment of a level rate of contribution each year.

\* Includes non-vested refunds and non-married survivor benefits only.

\*\* The amortization of the unfunded actuarial accrued liability (UAAL) using the current amortization method results in initial payments less than the "interest only" payment on the UAAL. Payments less than the interest only amount will result in the UAAL increasing for an initial period of time.

\*\*\* The amortization factor as of July 1, 2015 is 15.40466.

| f. Total  | <u>7.66%</u>                  | <u>\$ 208,931</u>        |
| 2. Supplemental contribution amortization of<br>Unfunded Actuarial Accrued Liability by June 30, 2041 | 4.45%                         | \$ 121,376               |
| 3. Allowance for expenses   | <u>0.33%</u>                  | <u>\$ 9,001</u>          |
| 4. Total  | 12.44% **                     | \$ 339,308               |
| C. Contribution Sufficiency/(Deficiency) (A.3. - B.4.)  | (1.44%)                       | \$ (39,276)              |

Note: Projected annual payroll for fiscal year beginning on the valuation date: \$2,727,560.

\*Includes non-vested refunds and non-married survivor benefits only.

\*\* The required contribution on a market value of assets basis is 11.45% of payroll.

## Development of Costs

### Special Groups - Military Affairs Calculation

Section 352.85 of Chapter 352 of Minnesota Statutes provides that certain military affairs personnel may retire, with an unreduced benefit, at age 60. In addition, they may receive disability benefits upon being found disqualified for retention in active military duty. To fund these special benefits, employees and employer contribute an extra 1.60% of payroll.

To recognize the effect of the unreduced early retirement benefit available at age 60, we have assumed that all military affairs personnel will retire at age 60, or if over age 60, one year from the valuation date.

The unfunded liability for these members, if any, is reflected in the total unfunded liability shown on page 16.

|  | <b>Year Ending<br/>June 30, 2015</b> |
|--|--------------------------------------|
| A. Projected annual earnings   | \$ 440,346                           |
| B. Total normal cost   |                                      |
| 1. Dollar amount   | \$ 50,155                            |

| Average Age, in years                     | 36.3                      |
| Average Service, in years                 | 3.6                       |

## Development of Costs

### Special Groups - Pilots Calculation

Section 352.86 of Chapter 352 of Minnesota Statutes provides that certain transportation department pilots may retire, with an unreduced benefit, at age 62. In addition, they may receive disability benefits upon being found disqualified for retention as pilots. To fund these special benefits, employees and employer contribute an extra 1.60% of payroll.

To recognize the effect of the unreduced early retirement benefit available at age 62, we have assumed that all pilots will retire at age 62, or if over age 62, one year from the valuation date.

This group is closed to new entrants effective June 1, 2008.

The unfunded liability for these members, if any, is reflected in the total unfunded liability shown on page 16.

|  | <b>Year Ending<br/>June 30, 2015</b> |
|--|--------------------------------------|
| A. Projected annual earnings   | \$ 88,070                            |
| B. Total normal cost   |                                      |
| 1. Dollar amount   | \$ 12,902                            |

## Development of Costs

### Special Groups - Fire Marshals Calculation

Section 352.87 of Chapter 352 of Minnesota Statutes provides that deputy state fire marshals may retire, with an unreduced benefit (with respect to service after July 1, 1999), at age 55. Credited Service after July 1, 1999 accrues retirement benefits at a rate of 2.00% per year, and disability benefits are based on a minimum of 15 years of service (20 years if duty related). To fund these special benefits, members contribute an extra 2.78% of payroll and employers contribute an extra 4.20% of payroll.

To recognize the effect of the unreduced early retirement benefit available at age 55, we have assumed that all fire marshals will retire in accordance with the retirement assumptions which apply to the members of the Correctional Employees Retirement Fund.

The unfunded liability for these members, if any, is reflected in the total unfunded liability shown on page 16.

|  | <b>Year Ending<br/>June 30, 2015</b> |

## Development of Costs

### Special Groups - Unclassified Plan Contingent Liability Calculation

*(Dollars in Thousands)*

Section 352D.02 of Chapter 352D of Minnesota Statutes provides that members credited with employee shares in the Unclassified Plan may elect to terminate participation in the Unclassified Plan and be covered by the State Employees Retirement Fund (General Plan) prior to termination of covered employment assuming that the member has acquired at least 10 years of allowable state service if hired prior to July 1, 2010 and has no more than 7 years of service if hired after June 30, 2010. Unclassified Plan members contribute 5.5% of payroll and employers contribute 6% of payroll. Certain members (Judges and Legislators) are not eligible to elect coverage under the State Employees Retirement Fund.

To recognize the effect of the option to elect coverage under the General Plan, we have assumed that all eligible Unclassified Plan members will elect coverage under the General Plan if such election provides the member with a greater economic present value than the accumulated contribution balance under the Unclassified Plan. The liabilities were measured using the actuarial assumptions that are applied to the State Employees Retirement Fund.

|   | <b>Year Ending<br/>June 30, 2015</b> |
|---|--------------------------------------|
| A. Number of active eligible members                                  | 1,216                                |

## **Actuarial Basis**

### **Actuarial Methods**

All actuarial methods are prescribed by Minnesota Statutes, the Legislative Commission on Pensions and Retirement, or the MSRS Board of Directors. Different methodologies may also be reasonable and results based on other methodologies would be different.

#### **Actuarial Cost Method**

Actuarial accrued liability and required contributions in this report are computed using the Entry Age Normal Cost method. This method is prescribed by Minnesota Statute. Under this method, a normal cost is developed by amortizing the actuarial value of benefits expected to be received by each active participant (as a level percentage of pay) over the total working lifetime of that participant, from hire to termination. Age as of the valuation date was calculated based on the dates of birth provided by the Fund. Entry age for valuation purposes was calculated as the age on the valuation date minus the provided years of service on the valuation date.

To the extent that current assets and future normal costs do not support participants' expected future benefits, an Unfunded Actuarial Accrued Liability ("UAAL") develops. The UAAL is amortized over the statutory amortization period using level percent of payroll assuming payroll increases. The total contribution developed under this method is the sum of the normal cost, expenses, and the payment toward the UAAL.

#### **Valuation of Future Post-Retirement Benefit Increases**

If the plan has reached the accrued liability funding ratio threshold (determined on a market value of assets basis) required to pay a 2.5% benefit increase, Minnesota Statutes require the 2.5% benefit increase rate to be reflected in the liability calculations. If the plan has not yet reached the accrued liability funding ratio threshold required to pay a 2.5% benefit increase, Minnesota Statutes require a projection to be performed to determine the expected attainment of the accrued liability funding ratio threshold, and the expected reversion to a 2.5% benefit increase rate must be reflected in the liability calculations.

#### **Funding Objective**

The fundamental financing objective of the fund is to establish contribution rates which, when expressed as a percentage of active member payroll, will remain approximately level from generation to generation and meet the required deadline for full funding.

#### **Decrement Timing**

All decrements are assumed to occur mid-fiscal year.

## Actuarial Basis

### Actuarial Methods (Concluded)

#### Asset Valuation Method

The assets are valued based on a five-year moving average of expected and market values (five-year average actuarial value) determined as follows:

- At the end of each plan year, an average asset value is calculated as the average of the market asset value at the beginning and end of the fiscal year net of investment income for the fiscal year;
- The investment gain or (loss) is taken as the excess of actual investment income over the expected investment income based on the average asset value as calculated above;
- The investment gain or (loss) so determined is recognized over five years at 20% per year; and
- The asset value is the sum of the market asset value plus the scheduled recognition of investment gains or (losses) during the current and the preceding four fiscal years.

#### Payment on the Unfunded Actuarial Accrued Liability

Payment equals a level percentage of payroll each year to the statutory amortization date of June 30, 2041 assuming payroll increases of 3.50% per annum. If there is a negative Unfunded Actuarial Accrued Liability, the surplus amount is amortized over 30 years as a level percentage of payroll. If the unfunded liability increases due to changes in benefits, assumptions, or methods, the statutory amortization date will be re-determined. Projected payroll is multiplied by 0.959 in the determination of the present value of future payroll to account for timing differences (as required by the Standards for Actuarial Work).

#### Changes in Methods since Prior Valuation

Based on direction from the LCPR's actuary, the July 1, 2014 entry age normal accrued liability and normal cost were calculated using an equivalent single interest rate of 8.40% due to the statutory select and ultimate discount rate structure. This method is no longer needed since the discount rate was changed from the select and ultimate assumptions to 8.00% for all years effective July 1, 2015.

## Actuarial Basis

### Summary of Actuarial Assumptions

The following assumptions were used in valuing the liabilities and benefits under the plan. All actuarial assumptions are prescribed by Minnesota Statutes, the Legislative Commission on Pensions and Retirement (LCPR), or the MSRS Board of Directors. These parties are responsible for selecting the assumptions used for this valuation. The assumptions prescribed are based on the last experience study, dated August 2009, prepared by a former actuary. The economic assumptions are based on a review of inflation and investment return assumptions dated September 11, 2014. An experience study for the 2008-2014 period was issued on June 30, 2015. This report recommended many changes to demographic assumptions, expected to be effective at a future date.

The Allowance for Combined Service Annuity was also based on a recommendation by a former actuary. We are unable to judge the reasonableness of this assumption without performing a substantial amount of additional work beyond the scope of the assignment.

|                                    |   |
|------------------------------------|---|
| Investment return                  | 8.00% per annum.  |
| Benefit increases after retirement | 2.00% per annum through 2035 and 2.5% per annum thereafter  |
| Salary increases                   | Reported salary at valuation date increased according to the rate table, to current fiscal year and annually for each future year. Prior fiscal year salary is annualized for members with less than one year of service.   |
| Inflation                          | 2.75% per year.   |
| Payroll growth                     | 3.50% per year.   |
| Mortality rates                    |   |
| Healthy Pre-retirement             | RP-2000 employee generational mortality table projected with mortality improvement scale AA, white collar adjustment, set forward three years for males and set back one year for females.  |
| Healthy Post-retirement            | RP-2000 annuitant generational mortality table projected with mortality improvement scale AA, white collar adjustment.  |
|                                    | The RP-2000 employee mortality table as published by the Society of Actuaries (SOA) contains mortality rates for ages 15 to 70 and the annuitant mortality table contains mortality rates for ages 50 to 95. We have applied the annuitant mortality table for active members beyond age 70 until the assumed retirement age and the employee mortality table for annuitants younger than age 50. |
| Disabled                           | RP-2000 disabled mortality table with no setback for males and set forward five years for females.  |
| Retirement                         | Members retiring from active status are assumed to retire according to the age related rates shown in the rate table. Members who have attained the highest assumed retirement age are assumed to retire in one year.   |

## Actuarial Basis

### Summary of Actuarial Assumptions (Continued)

| Withdrawal                             | Select and Ultimate rates based on actual experience. Ultimate rates after the third year are shown in rate table. Select rates in the first three years are:   |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
|--|---|--------------------|-------------------|--------------------|-------------------|------|------|------|------|--------|------|------|------|
|  | <table border="1"> <thead> <tr> <th></th> <th><u>First Year</u></th> <th><u>Second Year</u></th> <th><u>Third Year</u></th> </tr> </thead> <tbody> <tr> <td>Male</td> <td style="text-align: center;">0.45</td> <td style="text-align: center;">0.14</td> <td style="text-align: center;">0.09</td> </tr> <tr> <td>Female</td> <td style="text-align: center;">0.48</td> <td style="text-align: center;">0.15</td> <td style="text-align: center;">0.10</td> </tr> </tbody> </table>  |                    | <u>First Year</u> | <u>Second Year</u> | <u>Third Year</u> | Male | 0.45 | 0.14 | 0.09 | Female | 0.48 | 0.15 | 0.10 |
|  | <u>First Year</u>   | <u>Second Year</u> | <u>Third Year</u> |                    |                   |      |      |      |      |        |      |      |      |
| Male                                   | 0.45  | 0.14               | 0.09              |                    |                   |      |      |      |      |        |      |      |      |
| Female                                 | 0.48  | 0.15               | 0.10              |                    |                   |      |      |      |      |        |      |      |      |
| Disability                             | Age-related rates based on experience; see table of sample rates.   |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Allowance for Combined Service Annuity | Liabilities for active members are increased by 1.20% and liabilities for former members are increased by 40.00% to account for the effect of some participants having eligibility for a Combined Service Annuity.  |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Administrative expenses                | Prior year administrative expenses expressed as percentage of prior year projected payroll.   |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Refund of contributions                | Account balances accumulate interest until normal retirement date and are discounted back to the valuation date. All employees withdrawing after becoming eligible for a deferred benefit take the larger of their contributions accumulated with interest or the value of their deferred benefit.  |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Commencement of deferred benefits      | Members receiving deferred annuities (including current terminated deferred members) are assumed to begin receiving benefits at normal retirement age.  |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Percentage married                     | 85% of active male members and 70% of female members are assumed to be married. Actual marital status is used for members in payment status.  |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Age of spouse                          | Male members are assumed to have a beneficiary three years younger and female members are assumed to have a beneficiary two years older.  |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Form of payment                        | <p>Married members retiring from active status are assumed to elect subsidized joint and survivor form of annuity as follows:</p> <p>Males:      15% elect 50% Joint &amp; Survivor option<br/>                        10% elect 75% Joint &amp; Survivor option<br/>                        50% elect 100% Joint &amp; Survivor option</p> <p>Females:     15% elect 50% Joint &amp; Survivor option<br/>                        0% elect 75% Joint &amp; Survivor option<br/>                        25% elect 100% Joint &amp; Survivor option</p> <p>Remaining married members and unmarried members are assumed to elect the Straight Life option. Members receiving deferred annuities (including current terminated deferred members) are assumed to elect a life annuity.</p> |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Eligibility testing                    | Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.  |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Decrement operation                    | Withdrawal decrements do not operate during retirement eligibility.   |                    |                   |                    |                   |      |      |      |      |        |      |      |      |
| Service credit accruals                | It is assumed that members accrue one year of service credit per year.  |                    |                   |                    |                   |      |      |      |      |        |      |      |      |

## Actuarial Basis

### Summary of Actuarial Assumptions (Continued)

Unknown data for certain members

To prepare this report, GRS has used and relied on participant data supplied by the Fund. Although GRS has reviewed the data in accordance with Actuarial Standards of Practice No. 23, GRS has not verified or audited any of the data or information provided.

In cases where submitted data was missing or incomplete, the following assumptions were applied:

Data for active members:

There were 109 members reported with zero or invalid salary. We used prior year salary (68 members), if available, otherwise, high five salary with a 10% load to account for salary increases (33 members). If neither pay nor high five salary was available, we assumed a value of \$35,000 (8 members).

There were 24 members reported with zero or negative service. Due to the small number of members with zero service, and based on direction from MSRS, we used service of 0 years for these members.

There were also 31 members reported without a gender and 16 members reported with an invalid date of birth. We assumed the member was hired at age 37 and female gender.

Data for terminated members:

There were 575 members reported with a missing or invalid benefit. If available, we calculated benefits for these members using the reported Average Salary, Credited Service and Termination Date provided. If Average Salary was not reported (552 members), we assumed a value of \$30,000. If termination date was not reported (14 members), we assumed the member terminated at age 40 (or current age if younger than 40). If credited service was either not reported or invalid (9 members), we assumed a value of 7.5 years.

There were no members with an invalid gender or date of birth.

Data for members receiving benefits:

There were 4 members reported without a gender. We assumed female gender for the valuation. No retired members were reported with an invalid date of birth.

There were 3 members reported without a benefit. Due to the small number of members with missing benefits, we made no adjustment to the reported data for members receiving benefits.

There were 3 survivor members reported with a certain end date prior to the valuation date. These members were excluded from the valuation.

There were 390 retirees reported with a survivor option and a survivor date of death. We assumed no benefit was payable to the survivor, and the member benefit already reflected the increase to the life annuity value (i.e., “bounce back”), if applicable.

## Actuarial Basis

### Summary of Actuarial Assumptions (Continued)

---

|                                  |  |
|----------------------------------|--|
| Unknown data for certain members | <p><u>Data for members receiving benefits:</u></p> <p>There were 287 retirees reported with a bounce back annuity but were not reported with a reasonable reduction factor. A factor of 0.80, 0.85 and 0.90 was assumed for the 100%, 75% and 50% joint and survivor annuity, respectively.</p> <p>There were retired members reported with a survivor option and an invalid or missing survivor gender (4,614 members) and/or survivor date of birth (4,134 members). We used the valuation assumptions if the survivor gender or date of birth was missing or invalid.</p>                 |
| Changes in actuarial assumptions | <p>The discount rate was changed from 8.0% through June 30, 2017 and 8.5% thereafter to 8.0% for all years.</p> <p>The inflation assumption was changed from 3.00% to 2.75%</p> <p>The payroll growth assumption was changed from 3.75% to 3.50%.</p> <p>Assumed increases in member salaries were decreased by 0.25% at all ages.</p> <p>The assumed post-retirement benefit increase rate was changed from 2.0% per year through 2015 and 2.5% per year thereafter to 2.0% per year through 2035 and 2.5% per year thereafter. See page 4 for additional detail about this assumption.</p> |

| 65  | 1.16                                | 0.91   | 0.85                               | 0.54   | 5.02                 | 3.76   |
| 70  | 1.93                                | 1.52   | 2.67                               | 0.82   | 6.26                 | 5.22   |

\* Generally, mortality rates are expected to increase as age increases. Due to the combination of pre-retirement rates, post-retirement rates, the white collar adjustment, and Projection Scale AA, the prescribed mortality tables have a few ages where assumed mortality decreases slightly instead of increases. We have used the rates as prescribed, but note that the prescribed assumption may not be reasonable at every age. If the rates were reasonably adjusted so that they decreased at all ages, we would not expect the valuation results to be materially different.

\*\* These rates were adjusted for mortality improvements using projection scale AA.

| Age | Percent of Members Decrementing Each Year |        |                       |        |
|-----|---|--------|-----------------------|--------|

## Actuarial Basis

### Summary of Plan Provisions

Following is a summary of the major plan provisions used in the valuation of this report. MSRS is solely responsible for the validity, accuracy and comprehensiveness of this information. If any of the plan provisions shown below are not accurate and complete, the valuation results may differ significantly from those shown in this report and may require a revision of this report.

|                                  |   |                        |
|----------------------------------|---|------------------------|
| <b>Plan Year</b>                 | July 1 through June 30.   |                        |
| <b>Eligibility</b>               | State employees, non-academic staff of the University of Minnesota and employees of certain Metro level government units, unless excluded by law.   |                        |
| <b>Contributions</b>             | Shown as a percent of salary:   |                        |
|                                  | <b><u>Member</u></b>  | <b><u>Employer</u></b> |
| <u>Effective date</u>            |   |                        |
| July 1, 2014                     | 5.50%   | 5.50%                  |
|                                  | Member contributions are “picked up” according to the provisions of Internal Revenue Code 414(h).   |                        |
| <b>Allowable Service</b>         | Service during which member contributions were made. May also include certain leaves of absence, military service and periods while temporary Worker's Compensation is paid. Excludes lump sum vacation and severance pay at termination. |                        |
| <b>Average Salary</b>            | Average of the five highest successive years of Salary. Average Salary is based on all Allowable Service if less than five years.   |                        |
| <b>Salary</b>                    | Includes wages, allowances and fees. Excludes lump sum payments at separation, employer contributions to deferred compensation and tax-sheltered annuity plans and benevolent vacation and sick leave donation programs.                  |                        |
| <b>Retirement</b>                |   |                        |
| <u>Normal retirement benefit</u> |   |                        |
| Age/Service requirement          | First hired before July 1, 1989:  |                        |
|                                  | (a.) Age 65 and three years of Allowable Service.   |                        |
|                                  | (b.) Proportionate Retirement Annuity is available at age 65 and one year of Allowable Service.   |                        |
|                                  | First hired after June 30, 1989:  |                        |
|                                  | (a.) The greater of age 65 or the age eligible for full Social Security retirement benefits (but not higher than age 66) and three years of Allowable Service (five years if hired after June 30, 2010).                                  |                        |
|                                  | (b.) Proportionate Retirement Annuity is available at normal retirement age and one year of Allowable Service.  |                        |
| Amount                           | 1.70% of Average Salary for each year of Allowable Service.   |                        |

## Actuarial Basis

### Summary of Plan Provisions (Continued)

#### Retirement (Continued)

##### Early retirement

Age/Service requirement

First hired before July 1, 1989:

- (a.) Age 55 and three years of Allowable Service.
- (b.) Any age with 30 years of Allowable Service.
- (c.) Rule of 90: Age plus Allowable Service totals 90.

First hired after June 30, 1989:

- (a.) Age 55 and three years (five years if hired after June 30, 2010) of Allowable Service.

Amount

First hired before July 1, 1989:

The greater of (a) or (b):

- (a.) 1.20% of Average Salary for each of the first ten years of Allowable Service and 1.70% of Average Salary for each subsequent year with reduction of 0.25% for each month the member is under age 65 at time of retirement or under age 62 if 30 or more years of Allowable Service. No reduction if age plus years of Allowable Service totals 90.
- (b.) 1.70% of Average Salary for each year of Allowable Service assuming augmentation to age 65 at 3.00% per year and actuarial reduction for each month the member is under age 65.

First hired after June 30, 1989:

1.70% of Average Salary for each year of Allowable Service assuming augmentation to the age eligible for full Social Security retirement benefit (but not higher than age 66) at 3.00% (2.50% if hired after June 30, 2006) per year and actuarial reduction for each month the member is under the normal retirement age.

##### Form of payment

Life annuity with return on death of any balance of member contributions over aggregate monthly payments. Actuarially equivalent options are:

- (a.) 50%, 75%, or 100% Joint and Survivor with bounce back feature without additional reduction.
- (b.) 15-year Certain and Life.

##### Benefit increases

Since 2011, benefit recipients have received annual 2.0% benefit increases. When the accrued liability funding ratio reaches or exceeds 90% (determined on a market value of assets basis) for two consecutive years, the benefit increase will revert to 2.5%. If, after reverting to a 2.5% increase, the accrued liability funding ratio (determined on a market value of assets basis) declines to 80% or less for the most recent actuarial valuation year or 85% or less for two consecutive years, the benefit increase will decrease to 2.0%.

A benefit recipient who has been receiving a benefit for at least 12 full months as of the June 30 of the calendar year immediately before the adjustment will receive a full increase. Members receiving benefits for at least one month but less than 12 full months as of the June 30 of the calendar year immediately before the adjustment will receive a pro rata increase.

## Actuarial Basis

### Summary of Plan Provisions (Continued)

#### Retirement (Continued)

##### Benefit increases (Continued)

Prior to 2002, members who retired under the laws in effect before July 1, 1973 received an additional lump sum payment each year. In 1989, this lump sum payment was the greater of \$25 times each full year of Allowable Service or \$400 per full year of service less any Social Security benefits received or annuity from a Minnesota public employee pension plan. In each following year, the lump sum payment was increased by the same percentage increase that was applied to regular annuities paid from the Minnesota Post Retirement Investment Fund. Effective January 1, 2002, the annual lump sum payment was divided by 12 and paid as a monthly life annuity in the annuity form elected.

#### Disability

##### Disability benefit

##### Age/Service requirement

Total and permanent disability before normal retirement age with three years of Allowable Service (five years if hired after June 30, 2010).

##### Amount

Normal Retirement benefit based on Allowable Service and Average Salary at disability without reduction for commencement before normal retirement age.

Payments stop if disability ceases or death occurs. Payments revert to a retirement annuity at normal retirement age. Benefits may be reduced on resumption of partial employment.

##### Retirement after disability

##### Age/Service requirement

Normal retirement age with continued disability.

##### Amount

Any optional annuity continues. Otherwise, a normal retirement benefit equal to the disability benefit paid before normal retirement age, or an actuarially equivalent optional annuity.

##### Form of payment

Same as for retirement.

##### Benefit Increases

Same as for retirement.

#### Death

##### Surviving spouse optional benefit

##### Age/Service requirement

Member or former member who dies before retirement or disability benefits commence with three years of Allowable Service (five years if hired after June 30, 2010). If a former member dies before age 55 and has less than 30 years of Allowable Service, benefits commence when the former member would have been age 55. If an active member dies, benefits may commence immediately, regardless of age.

##### Amount

Surviving spouse receives the 100% joint and survivor benefits using the Normal Retirement formula above. If commencement is prior to age 55, the appropriate early retirement formula described above applies except that one-half the monthly reduction factor is used from age 55 to the commencement age and the Rule of 90 does not apply. In lieu of this benefit, the surviving spouse may elect a refund of member contributions with interest or an actuarially equivalent term certain annuity.

## Actuarial Basis

### Summary of Plan Provisions (Continued)

#### Death (Continued)

Amount (Continued) If a member dies prior to July 1, 1997 and the beneficiary was not eligible to commence a survivor benefit as of July 1, 1997, an actuarial increase shall be made for the change in the post-retirement interest rates from 5.00% to 6.00%.

Benefit increases Same as for retirement.

#### Surviving dependent children's benefit

Age/Service requirement If no surviving spouse, all children (biological or adopted) below age 20 who are dependent for more than half of their support on deceased member.

Amount Actuarially equivalent 100% joint and survivor annuity to surviving spouse payable to the later of age 20 or five years. The amount is proportionally divided among surviving children.

Benefit increases Same as for retirement.

#### Refund of contributions

Age/Service requirement Active member dies and survivor benefits are not payable or a former member dies before annuity begins or former member who is not entitled to an annuity dies.

Amount Member's contributions with 6.00% interest through June 30, 2011 compounded daily. Beginning July 1, 2011, a member's contributions increase at 4.00% interest compounded daily.

Age/Service requirement Retired or disabled annuitant who did not select an optional annuity dies, or the remaining recipient of an option dies.

Amount The excess of the member's contributions over all benefits paid.

---

**Unclassified Plan Provision** Eligible members credited with employee shares in the Unclassified Plan may elect to terminate participation in the Unclassified Plan and be covered by the State Employees Retirement Fund prior to termination of covered employment assuming that the member has acquired at least 10 years of allowable state service (no more than seven years of service if hired after June 30, 2010).

---

#### Termination

##### Refund of contributions

Age/Service requirement Termination of state service.

Amount Member's contributions with 6.00% interest through June 30, 2011 compounded daily. Beginning July 1, 2011 a member's contributions increase at 4.00% interest compounded daily. If a member is vested, a deferred annuity may be elected in lieu of a refund.

---

## Actuarial Basis

### Summary of Plan Provisions (Continued)

#### Termination (Continued)

##### Deferred benefit

Age/Service  
requirement

Three years of Allowable Service if hired prior to June 30, 2010, five years of Allowable Service if hired after June 30, 2010.

Amount

Benefit computed under law in effect at termination and increased by the following annual augmentation percentage:

- (a.) 0.00% before July 1, 1971;
- (b.) 5.00% from July 1, 1971 to January 1, 1981;
- (c.) 3.00% thereafter (2.50% if hired after June 30, 2006) until January 1 of the year following attainment of age 55 or January 1, 2012, whichever is earlier;
- (d.) 5.00% thereafter until the annuity begins (2.50% if hired after June 30, 2006), but before January 1, 2012. Amount is payable as a normal or early retirement;
- (e.) 2.00% from January 1, 2012 thereafter.

Amount is payable at normal or early retirement.

If a member terminated employment prior to July 1, 1997 but was not eligible to commence their pension before July 1, 1997, an actuarial increase shall be made for the change in the post-retirement interest rates from 5.00% to 6.00%.

#### **Combined Service Annuity**

Members are eligible for combined service benefits if they:

- (a.) Have sufficient allowable service in total that equals or exceeds the applicable service credit vesting requirement of the retirement plan with the longest applicable service credit vesting requirement;
- (b.) Have at least six months of allowable service credit in each plan worked under;
- (c.) Are not in receipt of a benefit from another plan, or have applied for benefits with an effective date within one year.

Members who meet the above requirements must have their benefit based on the following:

- (a.) Allowable service in all covered plans are combined in order to determine eligibility for early retirement.
- (b.) Average salary is based on the high five consecutive years during their entire service in all covered plans.

#### **Actuarial Equivalent Factors**

Actuarially equivalent factors based on RP-2000 mortality for healthy annuitants, white collar adjustment, projected to 2025 using scale AA, blended 55% males, 8.5% pre-retirement interest, and 6.5% post-retirement interest.

## Actuarial Basis

### Summary of Plan Provisions (Concluded)

---

**Contribution Stabilizer**      The following is a summary of the contribution stabilizer provisions in Minnesota Statute 352.045:

- If a contribution sufficiency of at least 1.0% of covered payroll exists, member and employer contributions may be adjusted by the MSRS Board of Directors to a level necessary to maintain a 1.0% sufficiency. Member and employer contributions may not be less than the sum of normal cost and administrative expenses.
- If a contribution deficiency of at least 0.5% of covered payroll exists, the member and employer contribution rates may be increased equally by the MSRS Board of Directors to eliminate the deficiency.
- Any adjustment to the contribution rates must be reported to the Legislative Commission on Pensions and Retirement (LCPR) by January 15 following the most recent valuation report. If the LCPR does not recommend against or alter the change in rates, the adjustment becomes effective on the first day of the first full payroll period of the fiscal year following receipt of the actuarial valuation that gave rise to the adjustment.

---

**Changes in Plan Provisions**      The Contribution Stabilizer statutes were revised to make changes to contribution rates less prescriptive and more flexible.

Effective July 1, 2015, a provision was added so that if the 2.5% post-retirement benefit increase is triggered and the accrued liability funding ratio (determined on a market value of assets basis) subsequently drops below 80% for the most recent valuation year or 85% for two consecutive years, the post-retirement benefit increase will change to 2.0% until the plan again reaches a 90% accrued liability funding ratio for two consecutive years.

---

<sup>1</sup> Information prior to 2012 provided by prior actuary. See prior reports for additional detail.

<sup>2</sup> Includes contributions from other sources (if applicable).

<sup>3</sup> Assumed equal to actual member contributions divided by 5.00%.

<sup>4</sup> Assumed equal to actual member contributions divided by 5.50%.

## Glossary of Terms

|   |  |
|---|--|
| <b><i>Accrued Benefit Funding Ratio</i></b>                 | The ratio of assets to Current Benefit Obligations.  |
| <b><i>Accrued Liability Funding Ratio</i></b>               | The ratio of assets to Actuarial Accrued Liability.  |
| <b><i>Actuarial Accrued Liability (AAL)</i></b>             | The difference between the Actuarial Present Value of Future Benefits, and the Actuarial Present Value of Future Normal Costs.   |
| <b><i>Actuarial Assumptions</i></b>                         | Assumptions about future plan experience that affect costs or liabilities, such as: mortality, withdrawal, disablement, and retirement; future increases in salary; future rates of investment earnings; future investment and administrative expenses; characteristics of members not specified in the data, such as marital status; characteristics of future members; future elections made by members; and other items.  |
| <b><i>Actuarial Cost Method</i></b>                         | A procedure for allocating the Actuarial Present Value of Future Benefits between the Actuarial Present Value of future Normal Costs and the Actuarial Accrued Liability.  |
| <b><i>Actuarial Equivalent</i></b>                          | Of equal Actuarial Present Value, determined as of a given date and based on a given set of Actuarial Assumptions.   |
| <b><i>Actuarial Present Value (APV)</i></b>                 | The amount of funds required to provide a payment or series of payments in the future. It is determined by discounting the future payments with an assumed interest rate and with the assumed probability each payment will be made.   |
| <b><i>Actuarial Present Value of Projected Benefits</i></b> | The Actuarial Present Value of amounts which are expected to be paid at various future times to active members, retired members, beneficiaries receiving benefits, and inactive, non-retired members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due. |
| <b><i>Actuarial Valuation</i></b>                           | The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for developing and monitoring a retirement system's funding policy, such as the Funded Ratio and the Annual Required Contribution (ARC).  |
| <b><i>Actuarial Value of Assets</i></b>                     | The value of the assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets or a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the actuarially required contribution (ARC).  |

## Glossary of Terms (Continued)

|   |  |
|---|--|
| <i>Amortization Method</i>                | A method for determining the Amortization Payment. Under the Level Percentage of Pay method, the Amortization payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. The stream of payments increases at the rate at which total covered payroll of all active members is assumed to increase.   |
| <i>Amortization Payment</i>               | That portion of the plan contribution or ARC which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.  |
| <i>Amortization Period</i>                | The period used in calculating the Amortization Payment.   |
| <i>Annual Required Contribution (ARC)</i> | The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation. The ARC consists of the Employer Normal Cost and Amortization Payment.  |
| <i>Augmentation</i>                       | Annual increases to deferred benefits.   |
| <i>Closed Amortization Period</i>         | A specific number of years that is reduced by one each year, and declines to zero with the passage of time. For example if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc.   |
| <i>Current Benefit Obligations</i>        | The present value of benefits earned to the valuation date, based on current service and including future salary increases to retirement.  |
| <i>Employer Normal Cost</i>               | The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.  |
| <i>Expected Assets</i>                    | The present value of anticipated future contributions intended to fund benefits for current members.   |
| <i>Experience Gain/Loss</i>               | A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two actuarial valuations. To the extent that actual experience differs from that assumed, Unfunded Actuarial Accrued Liabilities emerge which may be larger or smaller than projected. Gains are due to favorable experience, e.g., the assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, losses are the result of unfavorable experience, i.e., actual results that produce Unfunded Actuarial Accrued Liabilities which are larger than projected. |

## Glossary of Terms (Concluded)

|  |   |
|--|---|
| <b><i>GASB</i></b>                                 | Governmental Accounting Standards Board.  |
| <b><i>GASB Statements No. 25 and No. 27</i></b>    | These are the governmental accounting standards that set the accounting and financial reporting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 27 sets the accounting and financial reporting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 25 sets the rules for the systems themselves. These statements remain in effect only for pension plans that are not administered as trusts or equivalent arrangements. Please refer to the definition of GASB Statements No. 67 and No. 68 below.   |
| <b><i>GASB Statement No. 50</i></b>                | The accounting standard governing a state or local governmental employer's accounting for pensions. This statement remains in effect only for pension plans that are not administered as trusts. Please refer to the definition of GASB Statements No. 67 and No. 68.   |
| <b><i>GASB Statements No. 67 and No. 68</i></b>    | Statements No. 67 and No. 68, issued in June 2012, replace the requirements of Statements No. 25, No. 27 and No. 50, respectively, for pension plans administered as trusts. Statement No. 68, effective for the fiscal year beginning July 1, 2014, sets the accounting and financial reporting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 67, effective for the fiscal year beginning July 1, 2013, sets the rules for the systems themselves. Accounting and financial reporting information prepared according to Statements No. 67 and No. 68 is provided in a separate report beginning with the June 30, 2014 actuarial valuation. |
| <b><i>Normal Cost</i></b>                          | The annual cost assigned, under the Actuarial Cost Method, to the current plan year.  |
| <b><i>Projected Benefit Funding Ratio</i></b>      | The ratio of the sum of Actuarial Value of Assets and Expected Assets to the Actuarial Present Value of Projected Benefits.   |
| <b><i>Unfunded Actuarial Accrued Liability</i></b> | The difference between the Actuarial Accrued Liability and Actuarial Value of Assets.   |
| <b><i>Valuation Date</i></b>                       | The date as of which the Actuarial Present Value of Future Benefits are determined. The benefits expected to be paid in the future are discounted to this date.   |
