

**MINNESOTA STATE RETIREMENT SYSTEM**  
**STATE PATROL RETIREMENT FUND**  
**ACTUARIAL VALUATION REPORT AS OF JULY 1, 2016**

December 14, 2016

Minnesota State Retirement System  
State Patrol Retirement Fund  
St. Paul, Minnesota

Dear Board of Directors:

The results of the July 1, 2016 annual actuarial valuation of the State Patrol Retirement Fund are presented in this report. This report was prepared at the request of the Board and is intended for use by the Board and staff and those designated or approved by the Board. This report may be provided to parties other than the Fund only in its entirety. GRS is not responsible for the consequences of any unauthorized use of this report by persons other than intended users as described above.

The purpose of the valuation is to measure the Fund's funding progress and to determine the required contribution rate for the fiscal year beginning July 1, 2016. Note that we have not attempted to quantify the impact of GASB Statements No. 67 and No. 68 in this report. Please see the separate report dated December 1, 2016.

The required contribution rate shown on page one was designed to comply with Minnesota Statutes. Users of this report should be aware that contributions made at that rate do not guarantee benefit security. Given the importance of benefit security to any retirement system, we suggest that contributions to the System in excess of those presented in this report be considered.

The contribution rate in this report is determined using the actuarial assumptions and methods disclosed in the Actuarial Basis of this report. This report includes risk metrics on page five, but does not include a more robust assessment of the risks of future experience differing materially from the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment. We encourage a review and assessment of investment and other significant risks that may have a material effect on the plan's financial condition.

The valuation was based upon information furnished by the Minnesota State Retirement System (MSRS), concerning benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by MSRS.

Actuarial assumptions, including discount rates, mortality tables and others identified in this report, are prescribed by Minnesota Statutes Section 356.215, the Legislative Commission on Pensions and Retirement (LCPR), and the Board of Directors. These parties are responsible for selecting the plan's funding policy, actuarial valuation methods, asset valuation methods, and assumptions. The policies,

methods and assumptions used in this valuation are those that have been so prescribed and are described in the Actuarial Basis of this report. MSRS is solely responsible for communicating to GRS any changes required thereto.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of our assignment, we did not perform an analysis of the potential range of such future measurements.

This report should not be relied on for any purpose other than the purpose described herein. Determinations of the financial results associated with the benefits described in this report in a manner other than the intended purpose may produce significantly different results.

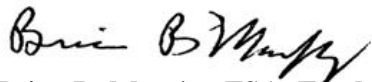

The signing actuaries are independent of the plan sponsor. We are not aware of any relationship that would impair the objectivity of our work.

Brian B. Murphy and Bonita J. Wurst are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. In addition, Mr. Murphy meets the requirements of "approved actuary" under Minnesota Statutes Section 356.215, Subdivision 1, Paragraph (c).

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge and belief, the information contained in this report is accurate and fairly presents the actuarial position of the State Patrol Retirement Fund as of the valuation date and was performed in accordance with the requirements of Minnesota Statutes Section 356.215, and the requirements of the Standards for Actuarial Work established by the LCPR. All calculations have been made in conformity with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board and with applicable statutes.

We are available to answer any questions or provide further details.

Respectfully submitted,

Brian B. Murphy, FSA, EA, MAAA, FCA

Bonita J. Wurst, ASA, EA, MAAA, FCA

## **Other Observations**

### **General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Plan Contributions and Funded Status**

Given the plan's contribution allocation procedure, if there are no changes in benefits or contributions and all actuarial assumptions are met (including the assumption of the plan earning 8.00%), it is expected that:

- (1) The unfunded actuarial accrued liabilities will be fully amortized after approximately 35 years,
- (2) The funded status of the plan will increase gradually towards a 100% funding ratio, and
- (3) The unfunded liability will grow initially as a dollar amount before beginning to decline.

### **Limitations of Funded Status Measurements**

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

- (1) The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations, in other words, of transferring the obligations to an unrelated third party in an arm's length market value type transaction.
- (2) The measurement is dependent upon the actuarial cost method which, in combination with the plan's amortization policy, affects the timing and amounts of future contributions. The amounts of future contributions will most certainly differ from those assumed in this report due to future actual experience differing from assumed experience based upon the actuarial assumptions. A funded status measurement in this report of 100% is not synonymous with no required future contributions. If the funded status were 100%, the plan would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).
- (3) The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets.

### **Limitations of Project Scope**

Actuarial standards do not require the actuary to evaluate the ability of the plan sponsor or other contributing entity to make required contributions to the plan when due. Such an evaluation was not within the scope of this project and is not within the actuary's domain of expertise. Consequently, the actuary performed no such evaluation.

## **Discount Rate Assumption**

In a 2015 analysis of long-term rate of investment return and inflation assumptions, GRS suggested that an investment return assumption in the range of 7.00% to 8.00% would be reasonable. The current assumed rate, which is mandated by Minnesota Statutes, is 8.00% and is at the upper end of the reasonable range. This report also concluded that the probability of exceeding the current 8.00% assumption over 20 years is only 37%. Please see the report, *Minnesota State Employees Retirement Fund 6-Year Experience Study*, dated June 30, 2015 for additional information.

Professional standards require GRS to evaluate this assumption each year. If an assumption is deemed unreasonable based on current information, we would have to qualify the work that we do for MSRS.

In May 2016, the Minnesota State Board of Investment (SBI) affirmed that the 8.00% return rate is attainable in the long-term, while acknowledging short term challenges. Also in May 2016, the LCPR's Actuary supported the reasonableness of the current rate by reviewing historical returns by investment class, projected returns from other investment consultants, and considering the SBI's projections. GRS believes the 8.00% return rate is within the reasonable range for this valuation as of July 1, 2016, but cautions MSRS that declining capital market and inflation expectations may result in 8.00% being deemed unreasonable for future valuations. In such an instance, we would still comply with statutes and produce the valuation based upon 8.00%, but Actuarial Standards would require us to issue a "qualified" report.

If a discount rate of 7.50% were used in this valuation instead of 8.00%, we estimate that the unfunded liability would be approximately \$39 million higher than estimated herein. This estimate incorporates lower salary scale rates due to lower inflation expectations as well as a delay in the assumed payment of 1.5% or 2.5% postretirement benefit increases.

## Summary of Valuation Results

### Contributions

The following table summarizes important contribution information as described in the Development of Costs section.

| Contributions   | Actuarial Valuation as of |              |
|---|---------------------------|--------------|
|   | July 1, 2016              | July 1, 2015 |
| Statutory Contributions - Chapter 352B (% of Payroll) | 37.37%                    | 34.93%       |
| Required Contributions - Chapter 356 (% of Payroll)   | 40.45%                    | 42.91%       |
| Sufficiency / (Deficiency)                            | (3.08)%                   | (7.98)%      |

The contribution deficiency decreased from 7.98% of payroll to 3.08% of payroll. The primary reasons for the decreased contribution deficiency are additional member and employer contributions and the decrease in liability due to an assumed delay in the 1.50% and 2.50% postretirement benefit increases (see page 4 for detailed information). On a market value of assets basis, contributions are deficient by 5.51% of payroll.

Based on the actuarial value of assets, statutory contributions are not sufficient to fully amortize the unfunded actuarial accrued liability over the statutory amortization period of 22 years. Based on current statutory contributions, the actuarial value of assets, and other methods and assumptions described in this report, the unfunded liability will be eliminated in approximately 35 years.

The Plan Assets section provides detail on the plan assets used for the valuation including a development of the Actuarial Value of Assets (AVA). The Market Value of Assets (MVA) earned approximately -0.2% for the plan year ending June 30, 2016. The AVA earned approximately 7.8% for the plan year ending June 30, 2016 as compared to the assumed rate of 8.00%. The assumed rate is a prescribed assumption mandated by Minnesota Statutes. The assumed rate is a prescribed assumption mandated by Minnesota Statutes, and is at the very upper end of the reasonable range. According to the NASRA survey, the most common assumption for statewide plans is currently 7.50%. Use of a 7.50% return assumption would produce a deficiency greater than shown above.

Participant reconciliation and statistics are detailed in the Membership Data section. The Actuarial Basis section includes a summary of plan provisions and actuarial methods and assumptions used for the calculations in this report.

Accounting and financial reporting information prepared according to GASB Statements No. 67 and No. 68 has been provided in a separate report dated December 1, 2016.

## Summary of Valuation Results

A summary of principal valuation results from the current valuation and the prior valuation follows. Any changes in plan provisions, actuarial assumptions or valuation methods and procedures between the two valuations are described after the summary.

## Summary of Valuation Results

### Effects of Changes

The following changes in plan provisions, actuarial assumptions, and methods were recognized as of July 1, 2016:

- The assumed post-retirement benefit increase rate was changed from 1.00% per year through 2029, 1.50% from 2030 through 2048 and 2.50% thereafter to 1.00% through 2044, 1.50% from 2045 through 2061 and 2.50% thereafter.

Refer to the Actuarial Basis section of this report for a complete description of these changes.

The combined impact of the above changes was to decrease the accrued liability by \$14.5 million and decrease the required contribution by 2.5% of pay, as follows:

|   | <b>Before<br/>Changes</b> | <b>Reflecting<br/>Assumption<br/>Changes</b> |
|---|---------------------------|--|
| Normal Cost Rate, % of Pay                              | 23.7%                     | 22.6%  |
| Amortization of Unfunded Accrued Liability,<br>% of Pay | 18.9%                     | 17.5%  |
| Expenses (% of Pay)                                     | 0.3%                      | 0.3%   |
| Total Required Contribution, % of Pay                   | 42.9%                     | 40.4%  |
| Accrued Liability Funding Ratio                         | 77.2%                     | 78.5%  |
| Projected Benefit Funding Ratio                         | 94.4%                     | 96.8%  |
| Unfunded Accrued Liability (in millions)                | \$193.5                   | \$179.0                                      |

## Summary of Valuation Results

### Valuation of Future Annual Post-Retirement Benefit Increases

Benefit recipients receive a future annual compounding 1.00% post-retirement benefit increase. If the accrued liability funding ratio (determined on a market value of assets basis) reaches or exceeds 85% (based on a 1.50% post-retirement increase assumption) for two consecutive years, the benefit increase will revert to 1.50%. Similarly, if the accrued liability funding ratio reaches or exceeds 90% (based on a 2.50% post-retirement increase assumption) for two consecutive years, the benefit increase will revert to 2.50%. If, after reverting to a 1.50% benefit increase, the accrued liability funding ratio declines to 75% or less for one year or 80% or less for two consecutive years, the benefit increase rate will decrease to 1.00%. Benefit increases already granted, however, will not be affected.

To determine an assumption regarding future changes in the post-retirement benefit increase, we performed a projection of liabilities and market value of assets based on the following methods and assumptions:

- Future investment returns and liability discount rates of 8.00%;
- Open group; stable active population (new member profile based on average new members hired in recent years);
- The post-retirement benefit increase rate is assumed to be 1.00% per year until the accrued liability funding ratio threshold required to pay a 1.50% post-retirement benefit increase is reached; and similarly, the post-retirement benefit increase is assumed to be 1.50% per year until the accrued liability funding ratio threshold required to pay a 2.50% post-retirement benefit increase is reached.
- Current statutory contribution levels (i.e., not including potential contribution increases under the contribution stabilizer statutes).

Based on these assumptions and methods, the projection indicates this plan is expected to attain the accrued liability funding ratio threshold to pay the 1.50% benefit increase in the year 2044 and the plan would begin paying 1.50% benefit increases on January 1, 2045. Similarly, the projection indicates this plan is expected to attain the accrued liability funding ratio threshold to pay the 2.50% benefit increase in the year 2061 and the plan would begin paying 2.50% benefit increases on January 1, 2062. This assumption is reflected in our calculations. This is only an assumption; actual timing will depend on actual experience.

#### Notes pertaining to numbered columns:

- (5) *The Funded ratio is the most widely known measure of a plan's financial strength, but the trend in the funded ratio is much more important than the absolute ratio. The funded ratio should trend to 100%. As it approaches 100%, it is important to re-evaluate the level of investment risk in the portfolio and potentially to re-evaluate the assumed rate of return.*
- (6) and (7). *The ratio of Retiree liabilities to total accrued liabilities gives an indication of the maturity of the system. As the ratio increases, cash flow needs increase, and the liquidity needs of the portfolio change. A ratio on the order of 50% indicates a maturing system.*
- (8) and (9). *The ratios of liabilities and assets to payroll gives an indication of both maturity and volatility. Many systems have ratios between 500% and 700%. Ratios significantly above that range may indicate difficulty in supporting the benefit level as a level % of payroll.*
- (10) and (11). *The portfolio standard deviation measures the volatility of investment return. When multiplied by the ratio of assets to payroll it gives the effect of a one standard deviation asset move as a percent of payroll. This figure helps users understand the difficulty of dealing with investment volatility and the challenges volatility brings to sustainability.*
- (12) *The ratio of unfunded liability to payroll gives an indication of the plan sponsor's ability to actually pay off the unfunded liability. A ratio above approximately 300% or 400% may indicate difficulty in discharging the unfunded liability within a reasonable time frame.*
- (13) *The ratio of non-investment cash flow to assets is an important measure of sustainability. Negative ratios are common and expected for a maturing system. In the longer term, this ratio should be on the order of approximately -4%. A ratio that is significantly more negative than that for an extended period could be a leading indicator of potential exhaustion of assets.*
- (15) and (16). *Investment return is probably the largest single risk that most systems face. The year by year return and the 5-year geometric average give an indicator of the realism of the systems assumed return. Of course, past performance is not a guarantee of future results. The performance data for the Combined Funds (pooled investments of major Minnesota Public Retirement Systems) is presented in these columns. The source of this data is the Minnesota State Board of Investment.*

*Information prior to 2012 provided by prior actuary. See prior reports for additional detail.*

## Supplemental Information

The remainder of the report includes information supporting the results presented in the previous sections.

- **Plan assets** presents information about the plan's assets as reported by the Minnesota State Retirement System. The assets represent the portion of total fund liabilities that has been funded.
- **Membership data** presents and describes the membership data used in the valuation.
- **Development of costs** shows the liabilities for plan benefits and the derivation of the contribution amount.
- **Actuarial basis** describes the plan provisions, as well as the methods and assumptions used to value the plan. The valuation is based on the premise that the plan is ongoing.
- **Additional Schedules** includes a summary of funding progress and contributions over the long term.
- **Glossary** defines the terms used in this report.

\* This exhibit does not reflect service earned in other MSRS or Combined Service Annuity benefits. It should not be relied upon as an indicator of non-vested status.

In each cell, the top number is the count of active participants for the age/service combination and the bottom number is average valuation earnings for the fiscal year ending on the valuation date.

## Development of Costs

### Actuarial Valuation Balance Sheet (*Dollars in Thousands*)

The actuarial balance sheet is based on the principle that the long-term projected benefit obligations of the plan should be ideally equal to the long-term resources available to fund those obligations. **A Projected Benefit Funding Ratio less than 100% indicates that contributions are insufficient.** The resources available to meet projected obligations for current members consist of current fund assets plus the present value of anticipated future contributions intended to fund benefits for current members. In the exhibit below, B.2 is the estimated present value of contributions to fund the normal cost rate for current members until their respective termination dates. Item B.1 is the present value of the total 37.37% statutory contribution net of normal cost and anticipated plan expenses during the period from the valuation date to the statutory unfunded amortization date.

The contributions made in excess of amounts required for current benefit payments are accumulated as a reserve to help meet benefit payments in later years. It is this reserve system which permits the establishment of a level rate of contribution each year.

\* Includes non-vested refunds and non-married survivor benefits only.

\*\* The amortization of the Unfunded Actuarial Accrued Liability (UAAL) using the current amortization method results in initial payments less than the "interest only" payment on the UAAL. Payments less than the interest only amount will result in the UAAL increasing for an initial period of time.

\*\*\* The amortization factor as of June 30, 2016 is 13.99209.

| 8. Other items   |  |                       | <u>1,311</u>                                    |
| 9. Total   |  |                       | (7,122)   |
| E. Unfunded Actuarial Accrued Liability at end of year before plan amendments and changes in actuarial assumptions (C. + D.9.) |  |                       | \$ 193,539                                      |
| F. Change in Unfunded Actuarial Accrued Liability due to changes in plan provisions  |  |                       | 0   |
| G. Change in Unfunded Actuarial Accrued Liability due to changes in actuarial assumptions                                      |  |                       | (14,495)  |
| H. Change in Unfunded Actuarial Accrued Liability due to changes in methodology  |  |                       | 0   |
| I. Unfunded Actuarial Accrued Liability at end of year (E. + F. + G. + H.)*  |  |                       | \$ 179,044                                      |

\* The Unfunded Actuarial Accrued Liability on a market value of assets basis is \$203,894.

## Development of Costs

### Determination of Contribution Sufficiency/(Deficiency) (*Dollars in Thousands*)

The required contribution is defined in Minnesota Statutes as the sum of normal cost, a supplemental contribution to amortize the UAAL, and an allowance for expenses. The dollar amounts shown are for illustrative purposes and equal percent of payroll multiplied by projected annual payroll.

|   | <u>Percent of<br/>Payroll</u> | <u>Dollar<br/>Amount</u> |
|---|-------------------------------|--------------------------|
| A. Statutory contributions - Chapter 352B   |                               |                          |
| 1. Employee contributions   | 14.40%                        | \$ 10,531                |
| 2. Employer contributions   | 21.60%                        | 15,797                   |
| 3. State contributions***   | 1.37%                         | 1,000                    |
| 4. Total  | <u>37.37%</u>                 | <u>\$ 27,328</u>         |
| B. Required contributions - Chapter 356   |                               |                          |
| 1. Normal cost  |                               |                          |
| a. Retirement benefits  | 19.62%                        | \$ 14,349                |
| b. Disability benefits  | 1.83%                         | 1,338                    |
| c. Survivors  | 0.55%                         | 402                      |
| d. Deferred retirement benefits   | 0.53%                         | 388                      |
| e. Refunds*   | 0.11%                         | 80                       |
| f. Total  | <u>22.64%</u>                 | <u>\$ 16,557</u>         |
| 2. Supplemental contribution amortization of Unfunded<br>Actuarial Accrued Liability by June 30, 2038 | 17.50%                        | \$ 12,798                |
| 3. Allowance for expenses   | <u>0.31%</u>                  | <u>\$ 227</u>            |
| 4. Total  | 40.45% **                     | \$ 29,582                |
| C. Contribution Sufficiency/(Deficiency) (A.4. - B.4.)  | (3.08)%                       | \$ (2,254)               |

Note: Projected annual payroll for fiscal year beginning on the valuation date: \$73,134.

\* Includes non-vested refunds and non-married survivor benefits only.

\*\* The required contribution on a Market Value of Assets basis is 42.88% of payroll.

\*\*\* Contributions paid until both the Public Employees Retirement Association Police and Fire Plan and the State Patrol Retirement Fund reach 90% funding (on a Market Value of Assets basis).

## **Actuarial Basis**

### **Actuarial Methods**

All actuarial methods are prescribed by Minnesota Statutes, the Legislative Commission on Pensions and Retirement, or the MSRS Board of Directors. Different methodologies may also be reasonable and results based on other methodologies would be different.

#### **Actuarial Cost Method**

Actuarial Accrued Liability and required contributions in this report are computed using the Entry Age Normal Cost Method. This method is prescribed by Minnesota Statute. Under this method, a normal cost is developed by amortizing the actuarial value of benefits expected to be received by each active participant (as a level percentage of pay) over the total working lifetime of that participant, from hire to termination. Age as of the valuation date was calculated based on the dates of birth provided by the Fund. Entry age for valuation purposes was calculated as the age on the valuation date minus the provided years of service on the valuation date.

To the extent that current assets and future normal costs do not support participants' expected future benefits, an Unfunded Actuarial Accrued Liability ("UAAL") develops. The UAAL is amortized over the statutory amortization period using level percent of payroll assuming payroll increases. The total contribution developed under this method is the sum of normal cost, expenses, and the payment toward the UAAL.

#### **Valuation of Future Post-Retirement Benefit Increases**

If the plan has reached the accrued liability funding ratio threshold (determined on a market value of assets basis) required to pay a 1.50% or 2.50% benefit increase, Minnesota Statutes require the 1.50% or 2.50% benefit increase rate to be reflected in the liability calculations. If the plan has not yet reached the accrued liability funding ratio threshold required to pay a 1.50% or 2.50% benefit increase, Minnesota Statutes require a projection to be performed to determine the expected attainment of the accrued liability funding ratio thresholds, and the expected payment of 1.50% or 2.50% benefit increases must be reflected in the liability calculations.

#### **Funding Objective**

The fundamental financing objective of the Fund is to establish contribution rates which, when expressed as a percentage of active member payroll, will remain approximately level from generation to generation and meet the required deadline for full funding.

## **Actuarial Basis**

### **Actuarial Methods (Concluded)**

#### **Asset Valuation Method**

The assets are valued based on a five-year moving average of expected and market values (five-year average actuarial value) determined as follows:

- At the end of each plan year, an average asset value is calculated as the average of the market asset value at the beginning and end of the fiscal year net of investment income for the fiscal year;
- The investment gain or (loss) is taken as the excess of actual investment income over the expected investment income based on the average asset value as calculated above;
- The investment gain or (loss) so determined is recognized over five years at 20% per year; and
- The asset value is the sum of the market asset value plus the scheduled recognition of investment gains or (losses) during the current and the preceding four fiscal years.

#### **Payment on the Unfunded Actuarial Accrued Liability**

Payment equals a level percentage of payroll each year to the statutory amortization date of June 30, 2038 assuming payroll increases of 3.50% per annum. If there is a negative Unfunded Actuarial Accrued Liability, the surplus amount is amortized over 30 years as a level percentage of payroll. If the unfunded liability increases due to changes in benefits, assumptions, or methods, the statutory amortization date will be re-determined. Projected payroll is multiplied by 0.959 in the determination of the present value of future payroll to account for timing differences (as required by the Standards for Actuarial Work).

#### **Changes in Methods since Prior Valuation**

There have been no changes in actuarial methods since the prior valuation.

## Actuarial Basis

### Summary of Actuarial Assumptions

The following assumptions were used in valuing the liabilities and benefits under the plan. All actuarial assumptions are prescribed by Minnesota Statutes, the Legislative Commission on Pensions and Retirement (LCPR), or the MSRS Board of Directors. These parties are responsible for selecting the assumptions used for this valuation. The assumptions prescribed are based on the last experience study, dated February 2012, prepared by a former actuary, and a review of inflation and investment return assumptions dated September 11, 2014. An experience study for the 2011-2015 period was issued on July 26, 2016. This report recommended many changes to demographic assumptions, expected to be effective at a future date.

The Allowance for Combined Service Annuity was also based on a recommendation by a former actuary. We are unable to judge the reasonableness of this assumption without performing a substantial amount of additional work beyond the scope of the assignment. We note that the LCPR has recently completed a review of this assumption. This review recommended changes to this assumption, expected to be effective at a future date.

|                                    |   |
|------------------------------------|---|
| Investment return                  | 8.00% per annum.  |
| Benefit increases after retirement | 1.00% per annum through 2044, 1.50% per annum from 2045 to 2061, and 2.50% per annum thereafter.  |
| Salary increases                   | Reported salary at valuation date increased according to the rate table, to current fiscal year and annually for each future year. Prior fiscal year salary is annualized for members with less than one year of service.   |
| Inflation                          | 2.75% per year.   |
| Payroll growth                     | 3.50% per year.   |
| Mortality rates                    |   |
| Healthy Pre-retirement             | RP-2000 employee generational mortality table projected with mortality improvement scale AA, white collar adjustment.   |
| Healthy Post-retirement            | RP-2000 annuitant generational mortality table projected with mortality improvement scale AA, white collar adjustment, set back two years for males and set forward one year for females.   |
|                                    | The RP-2000 employee mortality table as published by the Society of Actuaries (SOA) contains mortality rates for ages 15 to 70 and the annuitant mortality table contains mortality rates for ages 50 to 95. We have applied the annuitant mortality table for active members beyond age 70 until the assumed retirement age and the employee mortality table for annuitants younger than age 50. |
| Disabled                           | RP-2000 annuitant generational mortality table projected with mortality improvement scale AA, white collar adjustment, set back two years for males and set forward one year for females.   |
| Retirement                         | Members retiring from active status are assumed to retire according to the age related rates shown in the rate table. Members who have attained the highest assumed retirement age are assumed to retire in one year.   |

## Actuarial Basis

### Summary of Actuarial Assumptions (Continued)

| Withdrawal                             | Select and Ultimate rates based on actual experience. Ultimate rates after the third year are shown in rate table. Select rates in the first three years are:  |                         |                         |   |    |   |    |   |    |
|--|--|-------------------------|-------------------------|---|----|---|----|---|----|
|  | <table border="1"> <thead> <tr> <th style="text-align: center;">Year</th> <th style="text-align: center;">Select Withdrawal Rates</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">1</td> <td style="text-align: center;">5%</td> </tr> <tr> <td style="text-align: center;">2</td> <td style="text-align: center;">2%</td> </tr> <tr> <td style="text-align: center;">3</td> <td style="text-align: center;">2%</td> </tr> </tbody> </table>  | Year                    | Select Withdrawal Rates | 1 | 5% | 2 | 2% | 3 | 2% |
|  | Year   | Select Withdrawal Rates |                         |   |    |   |    |   |    |
|  | 1  | 5%                      |                         |   |    |   |    |   |    |
| 2                                      | 2%   |                         |                         |   |    |   |    |   |    |
| 3                                      | 2%   |                         |                         |   |    |   |    |   |    |
|  |  |                         |                         |   |    |   |    |   |    |
|  |  |                         |                         |   |    |   |    |   |    |
| Disability                             | Age-related rates based on experience; see table of sample rates. All incidences are assumed to be duty-related.   |                         |                         |   |    |   |    |   |    |
| Allowance for combined service annuity | Liabilities for former members are increased by 30.00% to account for the effect of some participants having eligibility for a Combined Service Annuity.   |                         |                         |   |    |   |    |   |    |
| Administrative expenses                | Prior year administrative expenses expressed as percentage of prior year projected payroll.  |                         |                         |   |    |   |    |   |    |
| Refund of contributions                | All employees withdrawing after becoming eligible for a deferred benefit take the larger of their contributions accumulated with interest or the value of their deferred benefit. Account balances for deferred members accumulate interest until normal retirement date and are discounted back to the valuation date.  |                         |                         |   |    |   |    |   |    |
| Commencement of deferred benefits      | Members receiving deferred annuities (including current terminated deferred members) are assumed to begin receiving benefits at age 55.  |                         |                         |   |    |   |    |   |    |
| Percentage married                     | 85% of active members are assumed to be married. Actual marital status is used for members in payment status.  |                         |                         |   |    |   |    |   |    |
| Age of spouse                          | Females are assumed to be two years younger than their spouses, and males are assumed to be two years older than their spouses.  |                         |                         |   |    |   |    |   |    |
| Eligible children                      | Each member may have two dependent children depending on member's age. Assumed first born child born at member's age 28 and second born child at member's age 31.  |                         |                         |   |    |   |    |   |    |
| Form of payment                        | <p>Married members retiring from active status are assumed to elect subsidized joint and survivor form of annuity as follows:</p> <p>Males:      15% elect 50% Joint &amp; Survivor option<br/>                        25% elect 75% Joint &amp; Survivor option<br/>                        35% elect 100% Joint &amp; Survivor option</p> <p>Females:    25% elect 50% Joint &amp; Survivor option<br/>                        30% elect 75% Joint &amp; Survivor option<br/>                        5% elect 100% Joint &amp; Survivor option</p> <p>Remaining married members and unmarried members are assumed to elect the Straight Life option.</p> |                         |                         |   |    |   |    |   |    |
| Eligibility testing                    | Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.   |                         |                         |   |    |   |    |   |    |
| Decrement operation                    | Withdrawal decrements do not operate during retirement eligibility. Decrements are assumed to occur mid-fiscal year.   |                         |                         |   |    |   |    |   |    |
| Service credit accruals                | It is assumed that members accrue one year of service credit per year.   |                         |                         |   |    |   |    |   |    |

## Actuarial Basis

### Summary of Actuarial Assumptions (Continued)

|                                  |   |
|----------------------------------|---|
| Pay increases                    | Pay increases are assumed to happen at the beginning of the fiscal year. This is equivalent to assuming that reported earnings are pensionable earnings for the year ending on the valuation date.  |
| Unknown data for certain members | <p>To prepare this report, GRS has used and relied on participant data supplied by the Fund. Although GRS has reviewed the data in accordance with Actuarial Standards of Practice No. 23, GRS has not verified or audited any of the data or information provided.</p> <p>There are no members reported with missing birth dates. In cases where submitted data was missing or incomplete, the following assumptions were applied:</p> <p><u>Data for active members:</u><br/>There were 2 members reported with missing salary and no members reported with missing service. We used prior year salary (2 members).</p> <p>There were no members reported with a missing or invalid date of birth or gender.</p> <p><u>Data for terminated members:</u><br/>There was 1 member reported without a benefit. We calculated benefits for this member using the reported Credited Service and Termination Date. Average Salary was not reported, so we assumed a value of \$35,000.</p> <p><u>Data for members receiving benefits:</u><br/>There were 2 members reported with a missing gender. We assumed male gender.</p> <p>There was 1 member reported without a benefit. Due to the small number of members with missing benefits, we made no adjustment to the reported data for members receiving benefits.</p> <p>There were no survivors reported with an expired benefit.</p> <p>There were no retirees reported with a bounce back annuity and an unreasonable reduction factor.</p> <p>There were 10 retirees reported with a survivor option and a survivor date of death. We assumed no benefit was payable to the survivor, and the member benefit already reflected the increase to the life annuity value (i.e. "bounce back"), if applicable.</p> <p>For retirees that elected a survivor benefit option, we used the valuation assumptions if the survivor date of birth was missing or invalid (209 members) and/or the survivor gender was missing or invalid (225 members).</p> |
| Changes in actuarial assumptions | The assumed post-retirement benefit increase rate was changed from 1.00% per year through 2029, 1.50% per year from 2030 through 2048, and 2.50% thereafter to 1.00% per year through 2044, 1.50% per year from 2045 through 2061, and 2.50% thereafter.  |

\* Generally, mortality rates are expected to increase as age increases. These standard mortality rates have been adjusted slightly to prevent decreasing mortality rates. If the rates were not adjusted as described, we would not expect the valuation results to be materially different.

\*\* These rates were adjusted for mortality improvements using projection scale AA.

| Age | Percent of Members Decrementing Each Year          |        |                       |        |

### Summary of Plan Provisions

Following is a summary of the major plan provisions used in the valuation of this report. MSRS is solely responsible for the validity, accuracy and comprehensiveness of this information. If any of the plan provisions shown below are not accurate and complete, the valuation results may differ significantly from those shown in this report and may require a revision of this report.

|                            |   |   |                 |
|----------------------------|---|---|-----------------|
| <b>Plan year</b>           | July 1 through June 30  |   |                 |
| <b>Eligibility</b>         | State troopers, conservation officers, certain crime bureau and gambling enforcement officers, and certain other persons listed in Minnesota Statutes 352B.011 subdivision 10.  |   |                 |
| <b>Contributions</b>       | Percent of Salary   |   |                 |
|                            | <u>Effective Date</u>   | <u>Member</u>   | <u>Employer</u> |
|                            | July 1, 2014 – June 30, 2016  | 13.40%  | 20.10%          |
|                            | July 1, 2016 and later  | 14.40%  | 21.60%          |
|                            | Member contributions are “picked up” according to the provisions of Internal Revenue Code 414(h).   |   |                 |
| <b>State Contributions</b> | \$1 million paid annually on October 1 until both the Public Employees Retirement Association Police and Fire Plan and the State Patrol Retirement Fund become 90% funded (on a Market Value of Assets basis).                            |   |                 |
| <b>Allowable service</b>   | Service during which member contributions were deducted. Includes period receiving temporary Worker's Compensation and reduced salary from employer. See Normal Retirement benefit definition below for information about service limits. |   |                 |
| <b>Salary</b>              | Salaries excluding lump sum payments at separation.   |   |                 |
| <b>Average salary</b>      | Average of the five highest years of Salary. Average Salary is based on all Allowable Service if less than five years. Average Salary is based on all years without regard to any service limits.   |   |                 |
| <b>Retirement</b>          |   |   |                 |
|                            | <u>Normal retirement benefit</u>  |   |                 |
|                            | Age/Service requirement   | Age 55 and three years (ten years if first hired after June 30, 2013) of Allowable Service.   |                 |
|                            | Amount  | 3.00% of Average Salary for each year of Allowable Service up to 33 years. Members with at least 28 years of service as of July 1, 2013 are not subject to this service limit. Member contributions made after the service cap will be refunded at retirement.  |                 |
|                            | <u>Early retirement benefit</u>   |   |                 |
|                            | Age/Service requirement   | Age 50 and three years (ten years if first hired after June 30, 2013) of Allowable Service.   |                 |
|                            | Amount  | Normal Retirement Benefit based on Allowable Service and Average Salary at retirement reduced by 1/10% for each month that the member is under age 55. If the effective date of retirement is after June 30, 2015, the reduction is 0.34% for each month that the member is under age 55 at the time of retirement. |                 |

## Actuarial Basis

### Summary of Plan Provisions (Continued)

#### Retirement (Concluded)

##### Form of payment

Life annuity.

Actuarially equivalent options are:

50%, 75%, or 100% Joint and Survivor, or 15-year certain. If a Joint and Survivor benefit is elected and the beneficiary predeceases the annuitant, the annuitant's benefit increases to the Life Annuity amount. This "bounce back" is subsidized by the plan.

##### Benefit increases

Since January 1, 2014, benefit recipients receive annual 1.00% benefit increases. When the accrued liability funding ratio (determined on a market value of assets basis) reaches or exceeds 85% for two consecutive years, the benefit increase will increase to 1.50%; the benefit will revert to 2.50% when the accrued liability funding ratio (determined on a market value of assets basis) reaches or exceeds 90% for two consecutive years. If, after reverting to a 1.50% increase, the accrued liability funding ratio declines to 75% or less for the most recent valuation year or 80% or less for two consecutive years, the benefit increase will decrease to 1.00%.

A benefit recipient who has been receiving a benefit for at least 12 full months as of the June 30 of the calendar year immediately before the adjustment will receive a full increase. Members receiving benefits for at least one month but less than 12 full months as of the June 30 of the calendar year immediately before the adjustment will receive a pro rata increase.

#### Disability

##### Occupational disability benefit

###### Age/Service requirement

Member who cannot perform his duties as a direct result of a disability relating to an act of duty.

###### Amount

60% of Average Salary plus 3.00% of Average Salary for each year in excess of 20 years of Allowable Service (pro rata for completed months).

Payments cease at age 65 (age 55 if disabled after June 30, 2015) or the 5-year anniversary of the effective date of the disability benefit, whichever is later. Payments stop earlier if disability ceases or death occurs.

Benefits may be paid upon re-employment but salary plus benefit cannot exceed current salary of position held at time of disability.

##### Non-duty disability benefit

###### Age/Service requirement

At least one year of Allowable Service and disability not related to covered employment.

###### Amount

Normal Retirement Benefit based on Allowable Service (minimum of 15 years) and Average Salary at disability without reduction for commencement before age 55.

Payments cease at age 65 (age 55 if disabled after June 30, 2015) or earlier if disability ceases or death occurs.

Benefits may be paid upon re-employment but salary plus benefit cannot exceed current salary of position held at time of disability.

## Actuarial Basis

### Summary of Plan Provisions (Continued)

#### Disability (continued)

##### Retirement after disability

|                          |   |
|--------------------------|---|
| Age/Service requirement  | Age 65 (age 55 if disabled after June 30, 2015) with continued disability.  |
| Amount                   | Optional annuity continues. Otherwise, normal retirement benefit equal to the disability benefit paid, or an actuarially equivalent option. |
| <u>Form of payment</u>   | Same as for retirement.   |
| <u>Benefit increases</u> | Same as for retirement.   |

#### Death

##### Surviving spouse benefit

|                         |  |
|-------------------------|--|
| Age/Service requirement | Member who is active or receiving a disability benefit or former member.   |
| Amount                  | 50% of Average Salary if member was active or occupational disability and either had less than three years (five years if first hired after June 30, 2013) of Allowable Service or was under age 55. Annuity is paid for life.<br><br>Surviving spouse receives the 100% joint and survivor benefit commencing on the member's 55th birthday if member was active or a disability with three years (five years if first hired after June 30, 2013) of Allowable Service. A spouse who had been receiving the 50% benefit shall be entitled to the greater benefit.<br><br>The surviving spouse of a former member receives the 100% joint and survivor benefit commencing on the member's 55th birthday if former member had three years (five years if first hired after June 30, 2013) of Allowable Service. |
| Benefit increases       | Same as for retirement.  |

##### Surviving dependent children's benefit

|                         |  |
|-------------------------|--|
| Age/Service requirement | Member who is active or receiving a disability benefit. Child must be unmarried, under age 18 (or 23 if full-time student) and dependent upon the member.          |
| Amount                  | 10% of Average Salary for each child and \$20 per month prorated among all dependent children. Benefit must not be less than 50% nor exceed 70% of Average Salary. |
| Benefit increases       | Same as for retirement.  |

##### Refund of contributions

|                         |  |
|-------------------------|--|
| Age/Service requirement | Member dies before receiving any retirement benefits and survivor benefits are not payable.          |
| Amount                  | Member contributions with 6.00% interest compounded daily until June 30, 2011, and 4.00% thereafter. |

## Actuarial Basis

### Summary of Plan Provisions (Continued)

---

#### Termination

##### Refund of contributions

|                         |  |
|-------------------------|--|
| Age/service requirement | Termination of state service.  |
| Amount                  | Member contributions with 6.00% interest compounded daily to June 30, 2011, and 4.00% thereafter.<br><br>If a member is vested, a deferred annuity may be elected in lieu of a refund. |

##### Deferred benefit

|                         |   |
|-------------------------|---|
| Age/service requirement | Three years (ten years if first hired after June 30, 2013) of Allowable Service.  |
| Amount                  | Benefit is computed under law in effect at termination and increased by the following annual augmentation percentage:<br><br>(a.) 0.00% before July 1, 1971;<br>(b.) 5.00% from July 1, 1971 to January 1, 1981;<br>(c.) 3.00% thereafter (2.50% if hired after June 30, 2006) until January 1, 2012; and<br>(d.) 2.00% after December 31, 2011 until the annuity begins.<br><br>Amount is payable at normal or early retirement.<br><br>If a member terminated employment prior to July 1, 1997, but was not eligible to commence their pension before July 1, 1997, an actuarial increase shall be made for the change in the post-retirement interest rates from 5.00% to 6.00%. |

---

#### Optional form conversion factors

Actuarially equivalent factors based on RP-2000 for healthy annuitants, white collar adjustment, projected to 2027 using scale AA, set back two years for males and set forward one year for females, blended 95% males, 6.50% post-retirement interest, and 8.50% pre-retirement interest.

---

#### Combined service annuity

Members are eligible for combined service benefits if they:

- Have sufficient allowable service in total that equals or exceeds the applicable service credit vesting requirement of the retirement plan with the longest applicable service credit vesting requirement; and
- Have at least six months of allowable service credit in each plan worked under; and
- Are not in receipt of a benefit from another plan, or have applied for benefits with an effective date within one year.

Members who meet the above requirements must have their benefit based on the following:

- Allowable service in all covered plans are combined in order to determine eligibility for early retirement.
- Average salary is based on the high five consecutive years during their entire service in all covered plans.

---

## Actuarial Basis

### Summary of Plan Provisions (Concluded)

---

**Contribution stabilizer**      The following is a summary of the contribution stabilizer provisions in Minnesota Statute 352.045:

- If a contribution sufficiency of at least 2.00% exists, member and employer contributions may be adjusted by the MSRS Board of Directors to a level necessary to maintain a 2.00% sufficiency. Member and employer contributions may not be less than the sum of normal cost and administrative expenses. Employer contributions must be equal to 60% of the sum of member and employer contributions.
- If a contribution deficiency of at least 0.50% exists, member and employer contribution rates may be increased by the MSRS Board of Directors to eliminate the deficiency. Employer contributions must be equal to 60% of the sum of member and employer contributions.
- Any adjustment to the contribution rates must be reported to the Legislative Commission on Pensions and Retirement (LCPR) by January 15 following the most recent valuation report. If the LCPR does not recommend against or alter the change in rates, the adjustment becomes effective on the first day of the first full payroll period of the next fiscal year.

---

**Changes in plan provisions**      There have been no changes in plan provisions since the prior valuation.

---

## Additional Schedules

<sup>1</sup> Information prior to 2012 provided by prior actuary. See prior reports for additional detail.

<sup>2</sup> Includes contributions from other sources (if applicable).

<sup>3</sup> Assumed equal to actual member contributions divided by 12.4%.

<sup>4</sup> Assumed equal to actual member contributions divided by 13.4%.

## Glossary of Terms

|   |  |
|---|--|
| <b><i>Accrued Benefit Funding Ratio</i></b>                 | The ratio of assets to Current Benefit Obligations.  |
| <b><i>Accrued Liability Funding Ratio</i></b>               | The ratio of assets to Actuarial Accrued Liability.  |
| <b><i>Actuarial Accrued Liability (AAL)</i></b>             | The difference between the Actuarial Present Value of Future Benefits, and the Actuarial Present Value of Future Normal Costs.   |
| <b><i>Actuarial Assumptions</i></b>                         | Assumptions about future plan experience that affect costs or liabilities, such as: mortality, withdrawal, disablement, and retirement; future increases in salary; future rates of investment earnings; future investment and administrative expenses; characteristics of members not specified in the data, such as marital status; characteristics of future members; future elections made by members; and other items.  |
| <b><i>Actuarial Cost Method</i></b>                         | A procedure for allocating the Actuarial Present Value of Future Benefits between the Actuarial Present Value of future Normal Costs and the Actuarial Accrued Liability.  |
| <b><i>Actuarial Equivalent</i></b>                          | Of equal Actuarial Present Value, determined as of a given date and based on a given set of Actuarial Assumptions.   |
| <b><i>Actuarial Present Value (APV)</i></b>                 | The amount of funds required to provide a payment or series of payments in the future. It is determined by discounting the future payments with an assumed interest rate and with the assumed probability each payment will be made.   |
| <b><i>Actuarial Present Value of Projected Benefits</i></b> | The Actuarial Present Value of amounts which are expected to be paid at various future times to active members, retired members, beneficiaries receiving benefits, and inactive, non-retired members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due. |
| <b><i>Actuarial Valuation</i></b>                           | The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for developing and monitoring a retirement system's funding policy, such as the Funded Ratio and the Annual Required Contribution (ARC).  |
| <b><i>Actuarial Value of Assets</i></b>                     | The value of the assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets or a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the actuarially required contribution (ARC).  |

## Glossary of Terms (Continued)

|  |  |
|--|--|
| <b><i>Amortization Method</i></b>                | A method for determining the Amortization Payment. Under the Level Percentage of Pay method, the Amortization payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. The stream of payments increases at the rate at which total covered payroll of all active members is assumed to increase.   |
| <b><i>Amortization Payment</i></b>               | That portion of the plan contribution or ARC which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.  |
| <b><i>Amortization Period</i></b>                | The period used in calculating the Amortization Payment.   |
| <b><i>Annual Required Contribution (ARC)</i></b> | The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation. The ARC consists of the Employer Normal Cost and Amortization Payment.  |
| <b><i>Augmentation</i></b>                       | Annual increases to deferred benefits.   |
| <b><i>Closed Amortization Period</i></b>         | A specific number of years that is reduced by one each year, and declines to zero with the passage of time. For example if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc.   |
| <b><i>Current Benefit Obligations</i></b>        | The present value of benefits earned to the valuation date, based on current service and including future salary increases to retirement.  |
| <b><i>Employer Normal Cost</i></b>               | The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.  |
| <b><i>Expected Assets</i></b>                    | The present value of anticipated future contributions intended to fund benefits for current members.   |
| <b><i>Experience Gain/Loss</i></b>               | A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two actuarial valuations. To the extent that actual experience differs from that assumed, Unfunded Actuarial Accrued Liabilities emerge which may be larger or smaller than projected. Gains are due to favorable experience, e.g., the assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, losses are the result of unfavorable experience, i.e., actual results that produce Unfunded Actuarial Accrued Liabilities which are larger than projected. |

## Glossary of Terms (Concluded)

|  |  |
|--|--|
| <b><i>GASB</i></b>                                 | Governmental Accounting Standards Board.   |
| <b><i>GASB Statements No. 25 and No. 27</i></b>    | These are the governmental accounting standards that set the accounting and financial reporting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 27 sets the accounting and financial reporting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 25 sets the rules for the systems themselves. These statements remain in effect only for pension plans that are not administered as trusts or equivalent arrangements. Please refer to the definition for GASB Statements No. 67 and No. 68 below. |
| <b><i>GASB Statement No. 50</i></b>                | The accounting standard governing a state or local governmental employer's accounting for pensions. This statement remains in effect for pension plans that are not administered as trusts. Please refer to the definition of GASB Statements No. 67 and No. 68 below.   |
| <b><i>GASB Statements No. 67 and No. 68</i></b>    | Statements No. 67 and No. 68, issued in June 2012, replace the requirements of Statements No. 25, No. 27 and No. 50, respectively, for pension plans administered as trusts. Statement No. 68 sets the accounting and financial reporting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 67 sets the rules for the systems themselves. Accounting and financial reporting information prepared according to Statements No. 67 and No. 68 is provided in a separate report beginning with the June 30, 2014 actuarial valuation.                          |
| <b><i>GASB Statement No. 82</i></b>                | Statement No. 82, issued in March 2016, is an amendment to Statements No. 67, No. 68, and No. 73, and is intended to improve consistency in the application of the accounting statements.  |
| <b><i>Normal Cost</i></b>                          | The annual cost assigned, under the Actuarial Cost Method, to the current plan year.   |
| <b><i>Projected Benefit Funding Ratio</i></b>      | The ratio of the sum of Actuarial Value of Assets and Expected Assets to the Actuarial Present Value of Projected Benefits. A Ratio less than 100% indicates that contributions are insufficient.  |
| <b><i>Unfunded Actuarial Accrued Liability</i></b> | The difference between the Actuarial Accrued Liability and Actuarial Value of Assets.  |
| <b><i>Valuation Date</i></b>                       | The date as of which the Actuarial Present Value of Future Benefits is determined. The benefits expected to be paid in the future are discounted to this date.   |
